

Facial rejuvenation with dermal fillers

Using a modern method of dermal fillers that contain hyaluronic acid, volume and a youthful appearance are restored to your skin. In a non-surgical procedure we reduce static wrinkles and bags under the eyes, enhance the lips and reshape the cheeks, nose or other facial features. The skin is more toned and the wrinkles less visible.

How it works:

Hyaluronic acid, which is known to bind water, is used to fill specific areas under the skin, giving it more tone, elasticity and volume. This enables us to erase wrinkles and enhance parts of the face. After 6 to 9 months, when the hyaluronate is dissolved and absorbed, the treatment should be repeated.

When to have the treatment:

When facial skin has lost its elasticity and become thinner because of dropping collagen levels.

Price:

Price of the treatment: EUR 300 to 350, depending on the extent.
Special promotional price EUR 270 to 290 (depending on the extent).
